

PermaMatrix® BSA

PermaMatrix® BSA
HYDRO
Biotic Soil Amendment

PermaMatrix® BSA HYDRO is an ideal alternative to traditional compost blankets or topsoil caps. It re-introduces carbon, depleted organics, missing micro-organisms and mycorrhizal fungi to highly disturbed and nutritionally deficient soils. **PermaMatrix® BSA HYDRO** is used wherever a vegetated solution is required to prevent erosion, stabilize bare ground and/or enhance biological function in under or un-productive soils.

*"How did PermaMatrix work?
In a word: phenomenal!"*

*"Where we did not hydroseed using
PermaMatrix®, we have very little growth and only
a few sparse weeds. Where we applied
PermaMatrix, we have a near jungle. The stuff
works!"*

Rick Dills, homeowner Hood River after seeding with
PermaMatrix® and Sunmark native grasses.

PermaMatrix® BSA HYDRO initiates the development of healthy soil through a combination of the essential elements that make up the life supporting organic matter of robust topsoil.

PermaMatrix® BSA HYDRO combines carbon based fiber, clean organics rich in humic and fulvic acids, micro-organisms, beneficial mycorrhizae fungi, water retaining organic polymers, and biochar to create an optimal growing medium for seed and plants.

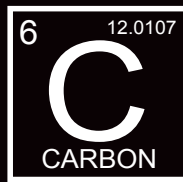

Upon application, these microbiological elements work together to enhance seed germination and increase vegetation on soils which have been previously disturbed by natural or man-made events.

With PermaMatrix® BSA HYDRO you will:

Save time – Hydraulically applying PermaMatrix® at recommended rates takes less than an hour per acre.

Save money – PermaMatrix® is applied using your existing hydroseeding equipment, and will restore your deficient soils at savings of up to 70% of the cost of traditional topsoil and compost placement.

Increase performance – Using PermaMatrix® instead of topsoil or compost establishes a quantifiable and sustainable growing medium for vegetation.

Reduce your risk – PermaMatrix® restores the biological function to soil in less time using less energy than topsoil replacement.
